Kubernetes v1.36: More Drivers, New Features, and the Next Era of DRA

Kubernetes blog

Kubernetes 1.36 advances Dynamic Resource Allocation (DRA) by stabilizing core features like the prioritized list, which lets admins define flexible fallback orders for diverse hardware. New support for native resources and PodGroups expands flexibility, while broader driver coverage ensures robust, hardware-agnostic infrastructure. These upgrades significantly improve cluster utilization and reliability for managing complex fleets of GPUs and specialized accelerators.
