Kubernetes v1.36: Deprecation and removal of Service ExternalIPs

Kubernetes blog

Kubernetes 1.36 formally deprecates the Service `externalIPs` field due to critical security flaws and the availability of safer alternatives. This change removes the insecure "insecure by default" behavior that allowed unauthorized external access, while future versions will drop support entirely. Users should immediately disable this feature to prevent exploitation and adopt modern load-balancing solutions.

Minimal Structures

Hacker News top

• [cnmon](#)

Minimal Structures explores how stripping away unnecessary elements can reveal the essential beauty and functionality of design. By focusing on simplicity, creators achieve clarity and efficiency that resonate deeply with modern audiences. This approach matters because it challenges us to question what truly adds value in our increasingly complex world.

• [vrolds](#)

LibreOps is a new open-source project aiming to replace the proprietary Ansible platform with a free, community-driven alternative. It seeks to solve critical issues like licensing costs and vendor lock-in that plague many organizations relying on enterprise automation tools. By offering a robust, transparent solution, LibreOps empowers businesses to maintain control over their infrastructure without paying exorbitant fees.
